

Project support to optimize the effectiveness of your Vorne XL™ Productivity Appliances

## Enterprise XL Standardization Program

### The Challenge

There are one or two plants in your organization that have been using the Vorne XL Appliances with moderate success as evident with efficiency and productivity improvement. You want to implement this success to all of your manufacturing facilities.

You may also want to interface with your ERP system to get consistent product standards automatically input into the Vorne XL and to get the completed job data back to your ERP system for order confirmation, etc.

You want to use one plant as the “proof-of-concept” for rolling out an **Enterprise Production Improvement Solution** and need help getting results. Fast!

### The Solution

The XL Appliance is designed so that your team can deploy it quickly and easily, so why would you want an XL Deployment Expert to visit your site? When you want to get outstanding results. Fast.

**Enterprise XL Standardization Program** is a 2 ½ -day onsite pilot workshop with a series of remote follow up calls with an experienced Vorne-Verified partner who will visit your site and work closely with your team to:

- Identify project stakeholders and owners and get them engaged.
- Develop and maintain a Project Governance plan to ensure all phases of the implementation are identified and managed. (We have a proven template for this!)
- Identify processes with operator touch points in mind. What does the operator have to interact with to provide **good data** to the production process.
- Audit and optimize the deployment of your XL Appliances
- Train your XL Champion how to configure and maintain the XL Appliances
- Train your management team on the data available with the XL Appliances & OEE Suite
- Document standard procedures for how to implement and use the XL Appliances
- Create 2-3 standard reports for the team to use on a regular basis

### Price

**Cost: \$8,995 (plus expenses)**

All Vorne XL Deployment Experts are experienced manufacturing professionals with genuine hands-on experience running and improving manufacturing processes who have completed extensive training and verification by Vorne Industries.

### Our Process

- 1. Project Governance:**  
Identify project stakeholders and owners. Implementation plan developed and maintained including RACI Matrix and detailed tasks.
- 2. Asset Assessment:**  
Assessment of current Vorne XL configurations and use as well as the surrounding processes contributing to the usage.
- 3. Set the Standard:**  
Setup one line as a “pilot” line to establish the standard configuration and processes. Configure and Test!
- 4. A Day in the Life with XL:**  
A template to document the operator processes for using the Vorne XL – keep it simple. Helps to think through all the possible scenarios to help standardize your configurations.
- 5. Program Support:**  
Provide ongoing remote support to ensure successful implementation.

**“Enterprise XL Standardization” will ensure that your XL System is capturing accurate information, your teams are trained on how to use the system, and you have a real and solid action plan for how to use XL to drive improvement.**
