Onsite-support to optimize the effectiveness of your Vorne XL™ Productivity Appliances

XL Asset Optimization Program

The Challenge

You have installed and are using Vorne XL Productivit**y** Appliances. They were installed and maintained by someone who may no longer be in that position and someone new (XL Champion)is taking over the responsibility.

Now you want to utilize them to their fullest capability and to utilize the newer features and enhancements.

Or you may be embarking on a standardization project across your enterprise and need help getting results. Fast!

The Solution

The XL Appliance is designed so that your team can deploy it quickly and easily, so why would you want an XL Deployment Expert to visit your site? When you want to get outstanding results. Fast.

XL Asset Optimization Program is a 2 ½ day onsite service with a series of remote follow up calls with an experienced Vorne XL Deployment Expert who will visit your site and work closely with your team to:

- Audit and optimize the deployment of your XL Appliances
- Train your XL Champion how to configure and maintain the XL Appliances
- Train your management team on the data available with the XL Appliances and OEE Suite
- Document standard procedures for how to use the XL Appliances
- Create 2-3 standard reports for the team to use on a regular basis
- Offer a valuable external perspective on how to use your XL Appliances as part of your improvement plan

Audience

New Vorne XL champion at the plant. Has minimal XL experience.

Price

Cost: $4,500 (plus expenses)
- 2 ½ days onsite time
- 4 hours coaching time

All Vorne XL Deployment Experts are experienced manufacturing professionals with genuine hands-on experience running and improving manufacturing processes who have completed extensive training and verification by Vorne Industries.

Our Process

1. Asset Assessment: Assessment of current Vorne XL configurations and use as well as the surrounding processes contributing to the usage.

2. Consistent Configurations Setup one line as a "pilot" line to establish the standard configuration and processes. Configure and Test!

3. A Day in the Life with Vorne: A template to document the operator processes for using the Vorne XL – keep it simple. Helps to think through all the possible scenarios to help standardize your configurations.

4. Using the OEE Suite to track improvement: Validate the data through the use of the Vorne XL interface, OEE Alert and OEE Studio.

"XL Asset Optimization" will ensure that your XL System is capturing accurate information, your team are trained on how to use the system, and you have a real and solid action plan for how to use XL to drive improvement.
